

**TIGERCAT FORWARDERS,  
ARE DESIGNED TO ACHIEVE  
HIGH PRODUCTION AND  
LOWEST COST PER TONNE  
IN THE WORLD'S MOST  
DEMANDING TRANSPORTING  
APPLICATIONS.**

- Innovative low-wide bunk system with Tigercat high capacity hooked crane
- Heavy duty construction for demanding applications and large, heavy payloads
- Ergonomic cabin with refined interior finish

### THE 1055C

The 1055C is a heavy duty 14-tonne forwarder for selective felling, final felling and biomass applications.

### THE 1075C

The 1075C is an extreme duty 20-tonne forwarder for final felling applications, long distance forwarding and scarifying applications.

### THE 1085C

The 1085C is a severe duty 25-tonne forwarder built for extreme terrain and the most demanding, high production forwarding applications.

## UNIQUE TIGERCAT HOOKED CRANE DESIGN

- Lift heavier loads with more slew torque than competing class cranes
- Optimal geometry for quick loading and unloading cycles
- High grapple clearance above the load
- End-of-position dampening sensors to prevent impact loads
- Tapered roller bearing in the slew base designed to last the life of the machine
- Equipped with swivels on the pillar hoses for extended hose life
- Thick walled bushings used at all pivots
- Cushioned telescopic cylinder

## HIGH CAPACITY TIGERCAT GRAPPLES

The Tigercat FG43 and FG53 grapples compliment the powerful Tigercat F195T85 crane with larger load areas for quicker cycles. Thick walled bushings, heavy duty Tigercat link, rotator and swing dampener with superior hose routing.

## INNOVATIVE LOW-WIDE BUNK SYSTEM WITH TIGERCAT HIGH CAPACITY HOOKED CRANE

Tigercat's unique low-wide angled bunk system combined with the Tigercat hooked crane expands the working envelope of the crane for reduced machine travel, decreased loading and unloading cycle time, and improved productivity.

Operator visibility and ergonomics are enhanced. The operator enjoys a clear sightline to the top of the load, increasing log placement accuracy and decreasing cycle times. In addition, the grapple stays within the operator's view through the entire loading and unloading cycle for reduced operator strain.

## LOW-WIDE BUNK ADVANTAGES

- Clear sight line to the top of the load, reducing operator strain
- Larger working envelope of the crane
- Easier crane operation decreasing loading and unloading cycle times
- Reduced chance of crane contact with gate or bunk stakes
- Increased log placement accuracy
- Grapple stays within operator's view through the entire loading cycle

**low-wide®**

**Tigercat®**  
by **FPT**  
POWERTRAIN TECHNOLOGIES

## TIGERCAT FPT ENGINE TECHNOLOGY

Tigercat FPT Tier 2 and Tier 4f engines offer quick load response, low operating costs and high power density, combined with excellent fuel economy.

The second-generation common rail fuel injection system provides top performance in the most demanding applications.

Tigercat FPT Tier 4f emission technology is simple and reliable. The Tier 4f configuration meets emission standards without complex add-on components. The key is the patented selective catalyst reduction (SCR) after-treatment system.

Tigercat FPT engines offer improved reliability and lower long-term maintenance costs – the clear power choice for forestry and off-road industrial applications.

TIGERCAT**POWER.**  
TIGERCAT**SUPPORT.**

**BUILT TOUGH**

## **POWER AND STABILITY**

The 1075C and 1085C are specifically designed for Tigercat's new high capacity F195T85 crane and the high capacity Tigercat FG43 and FG53 grapples. Confidently take a bigger bite for quicker loading and unloading times with Tigercat high capacity grapples.

The bogie axles are equipped with a friction clutch differential lock or MDDL (multi disc differential lock). This allows the operator to engage and disengage the differential locks while the machine is moving for increased productivity.

# widerANGE®

## **TIGERCAT'S WIDERANGE TRANSMISSION OFFERS MANY ADVANTAGES:**

- Extremely high tractive effort for high performance and full loads when travelling up steep slopes
- Quicker working travel speeds compared with a conventional two-speed transmission
- Excellent fuel efficiency
- Designed and manufactured by Tigercat

## **THE STRONGEST CHOICE**

Tigercat forwarders are equipped with a unique centre section. The oscillation joint is situated on the wagon frame for high stability when turning, operating on slopes and loading with the crane at extension. The centre section is constructed with large pins and tapered roller bearings for low maintenance and long life.

## EXCELLENT ACCESS TO THE ENGINE AND AFTER TREATMENT COMPONENTS.

The strong steel tilting engine house cover protects the engine and cooling system components and acts as a work platform when opened up. No add-on guarding is required.

## THE COMMAND CENTRE

Expansive, comfortable operator's station. Excellent visibility to the wheels and the load area through extra tall windows. Excellent ergonomics and low in-cab noise levels for high productivity during long shifts.
